All Tasks & Challenges — SQL Solutions

Table used: restaurants. These solutions follow the task wording and column names from the uploaded QuickBite challenge.

LEVEL 1 — Food Detective

Task 1 — Find restaurants having rating greater than 4.5

```
SELECT * FROM restaurants WHERE rating > 4.5;
```

Task 2 — Find restaurants whose average order value is less than 300

```
SELECT * FROM restaurants WHERE avg_order_value < 300;
```

Task 3 — Find all restaurants located in Pune

```
SELECT * FROM restaurants WHERE city = 'Pune';
```

Task 4 — Find restaurants having more than 20,000 orders

```
SELECT * FROM restaurants WHERE orders_count > 20000;
```

Task 5 — Find restaurants whose delivery time is greater than 40 minutes

```
SELECT * FROM restaurants WHERE est_delivery_time > 40;
```

Task 6 — Find restaurants whose rating is between 4.2 and 4.7

```
SELECT * FROM restaurants WHERE rating BETWEEN 4.2 AND 4.7;
```

Task 7 — Find restaurants belonging to South Indian, Italian or Biryani cuisine

```
SELECT * FROM restaurants WHERE cuisine IN ('South Indian', 'Italian', 'Biryani');
```

Task 8 — Find restaurants owned by a person whose name contains 'Patil'

```
SELECT * FROM restaurants WHERE owner_name LIKE '%Patil%';
```

Task 9 — Find restaurants where brand matches the restaurant name

```
SELECT * FROM restaurants WHERE brand = restaurant_name;
```

Task 10 — Find restaurants having delivery fee less than 30

```
SELECT * FROM restaurants WHERE delivery_fee < 30;
```

LEVEL 2 — Recommendation Team

Task 11 — Find the 5 restaurants with the highest number of orders

```
SELECT * FROM restaurants ORDER BY orders_count DESC LIMIT 5;
```

Task 12 — Find the 5 restaurants with the lowest average order value

```
SELECT * FROM restaurants ORDER BY avg_order_value ASC LIMIT 5;
```

Task 13 — Display restaurants from highest rating to lowest rating

```
SELECT * FROM restaurants ORDER BY rating DESC;
```

Task 14 — Display only unique cuisines using DISTINCT

```
SELECT DISTINCT cuisine FROM restaurants;
```

Task 15 — Display Restaurant and Rating using aliases Restaurant_Name and Customer_Rating

```
SELECT restaurant_name AS Restaurant_Name, rating AS Customer_Rating FROM restaurants;
```

Task 16 — Display restaurant name, owner and brand only

```
SELECT restaurant_name, owner_name, brand FROM restaurants;
```

Task 17 — Sort restaurants by city and then rating descending

```
SELECT * FROM restaurants ORDER BY city ASC, rating DESC;
```

Task 18 — Find the 5 highest-rated restaurants with more than 10,000 orders

```
SELECT * FROM restaurants WHERE orders_count > 10000 ORDER BY rating DESC LIMIT 5;
```

Task 19 — Find the 3 most ordered restaurants in Pune

```
SELECT * FROM restaurants WHERE city = 'Pune' ORDER BY orders_count DESC LIMIT 3;
```

Task 20 — Find the 5 restaurants with the highest delivery fee

```
SELECT * FROM restaurants ORDER BY delivery_fee DESC LIMIT 5;
```

LEVEL 3 — Find the Hidden Restaurants

Task 21 — Find restaurant names starting with S

```
SELECT * FROM restaurants WHERE restaurant_name LIKE 'S%';
```

Task 22 — Find restaurant names ending with 'House'

```
SELECT * FROM restaurants WHERE restaurant_name LIKE '%House';
```

Task 23 — Find restaurant names containing 'Cafe'

```
SELECT * FROM restaurants WHERE restaurant_name LIKE '%Cafe%';
```

Task 24 — Find cuisines containing 'Indian'

```
SELECT * FROM restaurants WHERE cuisine LIKE '%Indian%';
```

Task 25 — Find restaurant names having exactly 5 characters

```
SELECT * FROM restaurants WHERE restaurant_name LIKE '_____';
```

Task 26 — Find owners whose name contains 'Raj'

```
SELECT * FROM restaurants WHERE owner_name LIKE '%Raj%';
```

Task 27 — Find brands whose name contains 'Foods'

```
SELECT * FROM restaurants WHERE brand LIKE '%Foods%';
```

Task 28 — Find cities whose name starts with 'P'

```
SELECT DISTINCT city FROM restaurants WHERE city LIKE 'P%';
```

LEVEL 4 — Business Team

Task 29 — Find restaurants with average order value greater than 400 AND rating greater than 4.5

```
SELECT * FROM restaurants WHERE avg_order_value > 400 AND rating > 4.5;
```

Task 30 — Find restaurants with orders greater than 20,000 OR rating greater than 4.7

```
SELECT * FROM restaurants WHERE orders_count > 20000 OR rating > 4.7;
```

Task 31 — Find restaurants that are NOT in Pune

```
SELECT * FROM restaurants WHERE city <> 'Pune';
```

Task 32 — Find restaurants whose delivery time is between 25 and 40 minutes

```
SELECT * FROM restaurants WHERE est_delivery_time BETWEEN 25 AND 40;
```

Task 33 — Find restaurants whose average order value is between 300 and 600

```
SELECT * FROM restaurants WHERE avg_order_value BETWEEN 300 AND 600;
```

Task 34 — Find restaurants from Pune or Mumbai

```
SELECT * FROM restaurants WHERE city IN ('Pune', 'Mumbai');
```

Task 35 — Find Fast Food restaurants with more than 20,000 orders

```
SELECT * FROM restaurants WHERE cuisine = 'Fast Food' AND orders_count > 20000;
```

Task 36 — Find restaurants with rating greater than 4.5 and delivery fee below 40

```
SELECT * FROM restaurants WHERE rating > 4.5 AND delivery_fee < 40;
```

Task 37 — Find restaurants in Bengaluru with more than 10,000 orders

```
SELECT * FROM restaurants WHERE city = 'Bengaluru' AND orders_count > 10000;
```

Task 38 — Find restaurants where owner name is not 'Rahul Jain'

```
SELECT * FROM restaurants WHERE owner_name <> 'Rahul Jain';
```

LEVEL 5 — Boss Challenges

Challenge 1 — Hidden Gem — Rating above 4.5 but fewer than 10,000 orders

```
SELECT * FROM restaurants WHERE rating > 4.5 AND orders_count < 10000;
```

Challenge 2 — Cheap & Popular — Average order value below 300 and orders above 20,000

```
SELECT * FROM restaurants WHERE avg_order_value < 300 AND orders_count > 20000;
```

Challenge 3 — Fast Delivery — Delivery time below 30 minutes and rating above 4.3

```
SELECT * FROM restaurants WHERE est_delivery_time < 30 AND rating > 4.3;
```

Challenge 4 — Trending Restaurants — Find the 3 most ordered restaurants from Mumbai

```
SELECT * FROM restaurants WHERE city = 'Mumbai' ORDER BY orders_count DESC LIMIT 3;
```

Challenge 5 — Premium Restaurants — Average order value greater than the average order value of all restaurants

```
SELECT * FROM restaurants WHERE avg_order_value > (SELECT AVG(avg_order_value) FROM restaurants);
```

Challenge 6 — City Spotlight — Find all restaurants from Pune and sort them by orders highest to lowest

```
SELECT * FROM restaurants WHERE city = 'Pune' ORDER BY orders_count DESC;
```

Challenge 7 — Cuisine Report — Find all South Indian restaurants and display restaurant, city, rating and average order value.

```
SELECT restaurant_name, city, rating, avg_order_value FROM restaurants WHERE cuisine = 'South Indian';
```

Challenge 8 — High Value Partners — Average order value above 500 and rating at least 4.5

```
SELECT * FROM restaurants WHERE avg_order_value > 500 AND rating >= 4.5;
```

FINAL BOSS — CEO Challenge

Final Boss — Display restaurant name, cuisine, city, rating, average order value, orders count, delivery fee, owner and brand; rating > 4.4, orders > 10,000, average order value between 300 and 700; sort by orders descending; top 5

```
SELECT restaurant_name, cuisine, city, rating, avg_order_value, orders_count, delivery_fee,
owner_name, brand
FROM restaurants
WHERE rating > 4.4
AND orders_count > 10000
AND avg_order_value BETWEEN 300 AND 700
ORDER BY orders_count DESC
LIMIT 5;
```

Database setup from the task: CREATE DATABASE quickbite; USE quickbite; then create the restaurants table as provided in the challenge.
